

Address Verification

A NAV Extension by Lanham Associates

Address Verification

Verifying and maintaining the integrity of your addresses will increase customer satisfaction and reduce charges due to shipping errors.

The Lanham Address Verification extension uses a cloud database to verify any US or APO and FPO address in your system. It can be used on NAV pages, such as Customer and Vendor, as well as document pages such as Sales Orders and Purchase Orders. The objective is to verify addresses at initial entry, such as when creating a Customer record, which will reduce entry time and, later, frustration at shipping time.

Typically our customers add addresses to their system in 3 ways:

1. Adding a customer or vendor manually when entering an order.
2. Importing sales orders from websites which in turn creates customer and ship-to information.
3. When receiving EDI orders from on-line retailers for drop-ship fulfillment.

Once an address has been verified against the cloud database, it is stored in a separate verified address table in your local database. This allows the system to check verification when this address is used in a new document, such as a sales order, without interaction by the user and without another comparison of the address to the cloud database.

Addresses do need to be re-verified occasionally to ensure that nothing has changed. This is done by using a date formula that automatically re-verifies the address after a specified number of days, weeks, or months. This verification is handled without interaction from the user unless for some reason the address can't be re-verified.

In addition, there is also an Address Worksheet which allows you to verify addresses in groups, such as Customers or Sales Orders, that have not been verified. This feature is useful after the initial installation of Address Verification to verify, correct, and update all of your addresses.

About the Developer

Lanham Associates® creates supply chain software that improves customers' business processes by streamlining operations, cutting costs and increasing overall productivity. Lanham's Advanced Commerce ERP (ACE) Solution Suite offers a range of **forecasting** and **replenishing inventory**, **EDI**, **shipping/receiving**, and **warehouse management** solutions – all built inside NAV.

Lanham Associates: Seamless Simplicity for the Complex Side of Your Supply Chain.

What is a NAV Extension?

A NAV Extension is a way to extend Microsoft Dynamics NAV functionality without modifying base NAV.

With an extension, no object merge is required. You can easily install, upgrade, and uninstall functionality, which makes NAV upgrades much easier.

Prerequisites

Must be running NAV 2016 or newer.

Lanham Solutions

ACE Warehousing
Address Verification
AFP – Advanced Forecasting & Procurement
Lanham EDI
E-Receive
E-Ship
History Management
Inbound Container Tracking
Outbound Warehouse Request
POS Data Analysis
